

Telemetry Solutions

- Adlertech Systems provides or customised Telemetry solutions to users who are in Aerospace and Flight Test Instrumentations Environments.

- We are able to provide you a solution with electronic hardware and software to meet general purpose and application specific data acquisition, signal conditioning, data storage, data transmission, telemetry, signal recovery, data link and data processing requirements.

- Some of our the products that we could provide are:-

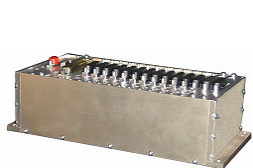

Telemetry Transmitters, Telemetry Receivers, PCM Encoders with associated Signal Conditioning Modules, Solid State Recording Modules and Recording Systems, Video Compression Modules and Systems, RF Telemetry and Video Data Transmitters and real time duplex data links

- These products are designed to be extremely rugged for harsh environments.
- We also provide a wide range of Signal Recovery and Telemetry Data Processing Systems which include single user, single stream Telemetry Ground Stations through to large multiple user, multiple simultaneous data stream Telemetry Ground Station installations which include both third party hardware and software products. Our Ground Station systems include many configurations of PC based Telemetry Data Processing Instrumentation which are supported by the industry standard developed Telemetry Environment Software package.

- Contact us on your Flight Test Instrumentation, Telemetry, Data Link or Video Surveillance system requirements for Aircraft, Ships, Unmanned Vehicles or similar applications. We will be pleased to provide you a proposal with our standard products or a customised solution on your requirements.
